

Dr. Henry Logan is working frantically to understand why his long-time patient, the intelligent and capable James Prentice, is rapidly unraveling. But what exactly is the cause of James' deterioration? Is it his emotionally distant marriage, his struggle to feel important within his career, or his growing obsession with a college student named Delia and her apparent indifference toward him?

This drama in one act examines the things that keep us going, the things that tear us apart, and the ways in which we impact one another, especially when secrets and passion are at stake.
